One of the most complete nursing education learning systems available, Virtual Clinical Excursions is an online program that guides you through a virtual hospital where the patients are real and their conditions are constantly changing. By immersing students in a realistic, yet safe, nursing environment, VCE simulates the average clinical rotation by allowing users to conduct a complete assessment of a patient and set priorities for care, collect information, analyze and interpret data, prepare and administer medications, and reach conclusions about complex problems. Each lesson has a textbook reading assignment and activities based on \"visiting\" the patients in the hospital - providing a perfect environment to \"practice\" what you are learning. Duration for access to this product, which may be at the discretion of your institution, is up to 36 months. Elsevier reserves the right to restrict or remove access due to changes in product portfolio or other market conditions. Online workbook includes a set of lessons to prepare and guide you through a variety of patient scenarios, which are all connected to your textbook. Physical examination interactions include unique images and assessment findings for each patient scenario. Patient chart provides quick access to vital information such as physician's orders, laboratory reports, patient education, nursing admission, and more, offering a richly detailed portrait of the patient. Electronic patient record houses data from the patient's entire hospital stay and offers the ability to record new data findings. Nurse-client interaction videos depict conversations and situations involving nurses, patients, family members, and hospital staff to help you discern between communications that are ideal and those that need improvement. Updated drug reference includes a comprehensive set of the latest drug monographs to help you make the best clinical judgments involving medication administration. NEW! Online format enables you to access Virtual Clinical Excursions from any PC or MAC with an internet connection. NEW! Laboratory guide provides standard value ranges for all laboratory values offered within the virtual patient hospital, so you can confirm and compare standard lab values against your patients' test results.

Clinical Companion for Ashwil and Droske Nursing Care of Children

The skills required by children's nurses are many and varied, and are undertaken in a variety of settings. This book provides a clinical manual of common practices. Each practice is research-based and presented in a common format which covers: Objectives, Rationale, Factors to note, Guidelines, Positioning, Equipment, Method, Special observations and possible complications, and References and further reading. The guidelines have been written specifically for children's nursing by contributors from well-known children's units. They are not simply adaptations from adult practices and therefore recognise the unique differences between adult and children's nursing. The introductory section covers common concepts and infection control. There are also appendices on the use of play as a distraction, and on complementary therapies. The common format of each practice makes the book easy to use and refer to in a clinical setting. Each practice is based on the latest research to ensure it is evidence-based and up to date. Introductory chapters cover issues common to all practices to make the book easier to use. The appendix on play reinforces its common usage as a distraction technique. A chapter on complementary therapies explains these as they are becoming more widespread. All practices have been reviewed by regional centres to avoid parochialism. Content reorganised to reflect the Essential Skills Clusters from the NMC. New chapter on communicating with children. All chapters updated to reflect the current evidence base.

Nursing Care of Children - Binder Ready

Nursing care for pregnant women and children is a family-centered process, and *Maternal and Child Nursing Care, 3e*, is a text that addresses the needs of families across the continuum, from conception through adolescence. The themes that shape this book- nursing care in the community, client education, critical thinking, and evidence-based practice in nursing- will prepare students for the responsibility of managing care for families with diverse healthcare needs, and to work collaboratively with families and other health professionals to enhance care.

Principles of Pediatric Nursing: Pearson New International Edition

The Nottingham model of care, working with children and their parents, evolved in response to the needs of children and families and out of a shared commitment to change. The Children's Unit in Nottingham has a high profile nationally and internationally and has striven to adapt, create and develop innovative practice to meet the needs of sick children and their families. *Children's Nursing in Practice: The Nottingham Model* outlines the practice application of the model with numerous case studies. It challenges accepted practice and provides a theoretical and conceptual framework to guide and enhance the delivery of care within children's units. In Nottingham, parents, families and nurses work together to create a "homelike" environment that enables children and families to maintain some control over their lives by facilitating the development of additional caring skills and knowledge. This is achieved by a process of staff development and the creation of a supportive environment. The model is about caring not only for patients and relatives but also staff. With increasing interest in nursing theories and models and their application to practice, this book is an essential source of information for all practitioners working with children.

Principles of Pediatric Nursing

The leading text in pediatric nursing, *Wong's Nursing Care of Infants and Children* takes a unique, easy-to-understand developmental approach to describe the care of children at each age and stage of development. Childhood diseases and disorders are organized by age groups and body systems, and described through the nursing process framework. This edition includes updates on topics such as the new CPR guidelines, immunizations, and pain assessment and management. Written by pediatric experts, Dr. Marilyn Hockenberry and David Wilson, each with nearly 30 years of hands-on experience, this bestseller provides an evidence-based, clinical perspective that shows how the quality of nursing care can impact quality patient

outcomes. \"A good neonatal and paediatric reference and textbook...\" Reviewed by Jo Wilson on behalf of Nursing Times, March 2015 A developmental approach addresses the differences at each stage of the child's growth and enables you to individualize care at the appropriate level for each child. UNIQUE! Quality Patient Outcomes are discussed for major childhood diseases and disorders, showing how nursing care directly impacts patient outcomes. Nursing Care Plans provide models for planning patient care, with rationales explaining why specific nursing interventions have been chosen, and include nursing diagnoses, patient/family goals, nursing interventions/rationales, expected outcomes, and NIC and NOC guidelines. A focus on family-centered care emphasizes the role and influence of the family in health and illness with a separate chapter and Family-Centered Care boxes. Critical thinking exercises use case studies to help you test and develop your own analytical skills. Nursing Care Guidelines provide clear, step-by-step, detailed instructions on performing specific skills or procedures. Nursing Tips include helpful hints and practical, clinical information, and Nursing Alerts provide critical information that must be considered in providing care. An emphasis on wellness includes principles of health promotion and injury prevention for each age group. Drug Alerts highlight important drug-related information for safe, appropriate care. Pathophysiology Reviews explain complicated disease processes with illustrated summary boxes. Complementary & Alternative Therapy boxes include timely information on alternative medicine as a part of complete, comprehensive care. Atraumatic Care boxes contain techniques for care that minimize pain, discomfort, or stress, and provide guidance for performing procedures in a caring manner. Emergency Treatment boxes serve as a quick reference in critical situations.

Maternal and Child Nursing Care with Clinical Skills Manual

"I cannot remember when I last read a nursing text and felt the same sense of relief: at last we have a resource which brings together the mass of concepts, theories and practice issues which are so fundamental to children's nursing. What is unique about this book is that it really does take the step of putting theories into practice. This book would make an excellent introduction for those wanting to increase their level of expertise in working with children and families at any stage in their careers." - extract from The Foreword by Anne Casey - Editor of Paediatric Nursing. Family centred care is the cornerstone of Children's Nursing practice and this engaging and comprehensive text introduces both the theoretical and practical components of this important concept. The authors analyse current issues surrounding family centred care and provide readers with a unique Continuum for Practice that will enable them to implement the concept both in the community and in hospital based settings. The text is clearly structured into the following three parts: Part One provides a definition of family centred care and a Practice Continuum. Part Two is an analysis of current perspectives, issues and challenges impinging on family centred care. Part Three addresses the skills required to actually practice family centred care so that it can become a reality for children, families and nurses. The underlying principles of family centred care are presented as frameworks grounded in the realities of day-to-day practice. In this way the reader is equipped with a toolkit that they can use to develop their expertise, at their own pace in their individual care environment. Family Centred Care will be essential reading for all student and qualified nurses working with children and their families in a variety of health care settings.
